

## How to Install GlobalProtect on Ubuntu 18.04/19.10

1) Login to your computer, open up a shell/terminal and run these commands.

```
$ cd ~/Downloads
```

2) Download the tar file with the most updated version number.

```
$ wget https://software.anu.edu.au/itservices/it-security/PanGPLinux-5.1.0-c101.tgz;tar  
zxvf PanGP*
```

*\*If you are installing the GUI version of GlobalProtect then please skip to step 4.*

3) To install GlobalProtect for the CLI only, enter the command below.

```
$ sudo mkdir ~/.GlobalProtect;sudo chown -Rf $USER:$USER ~/.GlobalProtect;sudo apt  
install -y  
./GlobalProtect_deb-5.1.0.0-101.deb
```

a. Connect to your appropriate ANU VPN portal i.e. staff-access, student-access, managed-access (for VaHa) and enter your credentials. If all is successful, you are connected!

```
$ globalprotect connect --portal staff-access.anu.edu.au
```

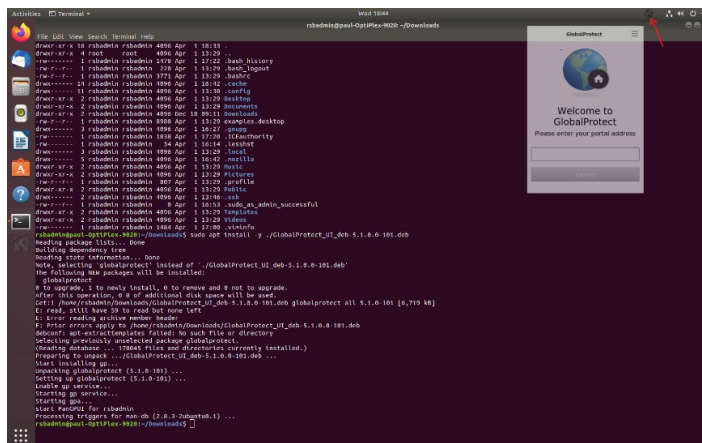

b. To disconnect use the following command.

```
$ globalprotect disconnect
```

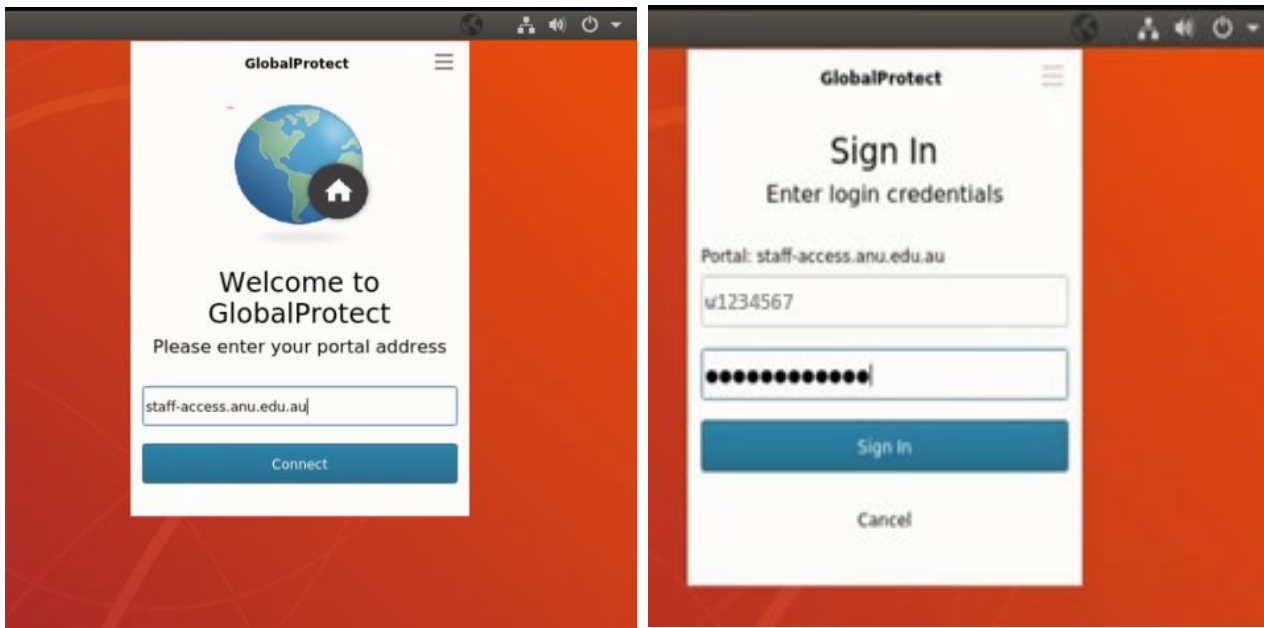

4) To install the complete GUI version, enter the following commands.

```
$ sudo apt install -y ./GlobalProtect_UI_deb-5.1.0.0-101.deb
```

5) Upon completion, double-click on the GlobalProtect GUI icon.

- 6) Enter the [portal address appropriate to you](#) (e.g. [staff-access@anu.edu.au](mailto:staff-access@anu.edu.au), [student-access@anu.edu.au](mailto:student-access@anu.edu.au), <https://partner-access.anu.edu.au> (for VaHA's) and your ANU account and password.
